New DDX Valves replacing our LDX and BX Valves

January 2007

Dear Valued Customer:

Because of our commitment to providing you with the latest in fire protection technology, Reliable will be **phasing out** our **Model LDX and BX Valves**.

Our new **DDX Valves** will be **replacing these valves**. The DDX Valve does not require a riser check valve for either Low Pressure Dry Systems or for Preaction Systems. Also, the DDX requires only one main drain while the LDX and BX require two main drains. The DDX Valve is extremely lightweight and weighs 50% less than the BX Valve. We've redesigned and improved the external reset knob feature on the DDX. Also, they are rated 250 psi in lieu of 175 psi of the older valves.

Both the Model LDX and BX Valves will be available **until April 1, 2007** or until inventory is depleted.

Please anticipate your needs and check with your local sales office for availability.

Sincerely,

A handwritten signature in black ink that reads "Michael".
