

# MODEL KFR-CCS

Combustible Concealed Space Sprinkler

## No Draft Curtains

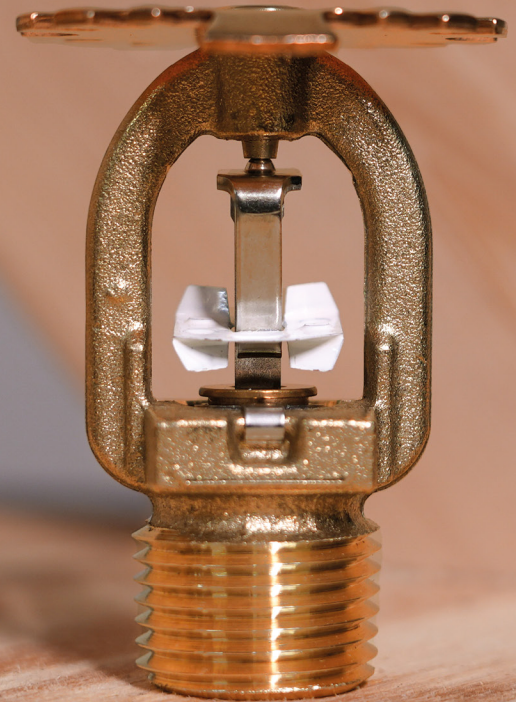

### Enhanced Listing

The Reliable Model KFR-CCS Sprinkler is designed for the protection of specific light hazard combustible and noncombustible concealed spaces requiring sprinkler protection. Its high, flat spray pattern provides ideal coverage of these spaces and its rugged 212°F fusible link design requires no shipping protector. The KFR-CCS is suitable for installation with CPVC pipe (wet systems) or steel pipe (wet, dry or preaction systems).

### The KFR-CCS recently received an enhanced cULus Listing:

- Protection of concealed spaces with trusses without requiring draft curtains.
- Protection of concealed spaces with trusses up to 60 inches in height.
- Maximum sprinkler spacing up to 16 feet in concealed spaces with trusses or non-combustible insulation-filled joists.
- Matches industry leading hydraulic requirements for wet systems.

*Assembled & Rigorously  
Tested in Liberty, SC*

Proper sprinkler application made easier with designer-friendly bulletin 044.
