

## VT75 Oil Free Compressor

R004A

The Vee Twin pump unit is perfect at giving the best possible air quality and is extremely low maintenance, making the VT75 the perfect partner for Reliable valve stations.

The Vee Twin pump unit is built using the latest 'tilting piston' technology. Allowing it to be one of the lowest noise levels of any oil free compressor available.

All compressor units in the VT Range are fitted with a "soft start" solenoid valve. This discharges the air pressure in the pump whenever the power is disconnected, protecting the compressor from overload and extending the service life. Anti corrosion, internally coated air receivers are fitted across the range ensuring the air is contamination free.

Every model is available with our innovative Air Dryer unit designed to guarantee "desert dry" air. The multi row, fan assisted after-cooler reduces the air temperature prior to entering the dryer. Dramatically reducing the air temperature enables the integral coalescing filter to collect and remove water droplets as small as 0.01 microns.
