PrePaK™ Systems for Critical Areas

Proven Cabinets for Special Applications

Fire protection equipment in a plug-and-play design

Quick and easy to set up onsite: connect the water supply, drain, system piping connections, alarm, and power supply. After the system set up, you're done! The PrePaK™ System has unsurpassed reliability in Preaction, Dry Pipe, and Deluge Valve systems technology. Extensive third-party approvals and rigorous quality control by Reliable® make PrePaK™ Systems dependable fire protection for critical applications.

The Factory Assembled Box

The Cabinet Features and Benefits

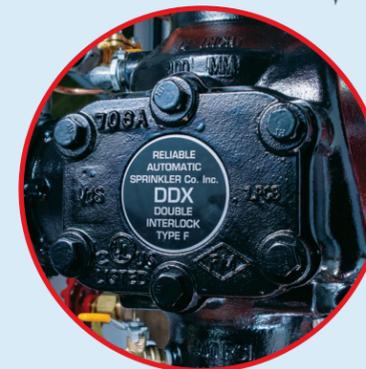

- Saves floor space with a system valve and all accessories in a compact cabinet.
- Powder-coated steel construction protects equipment.
- All sizes fit through a standard 36" (914 mm) doorway, making the unit easier to locate and install.
- Lifting eyes are a secondary safe way to position your PrePaK™ System.
- Access panels on both sides provide future access to the interior, no matter the cabinet location.
- Dual mirrored water supply and drain connections on common center lines provide flexibility and the ability to connect many systems next to each other with spool or concentric reducers.
- View supply and system pressure gauges and optional releasing control panel from the outside the cabinet.
- Grommets for pipe penetrations seal openings.
- Factory-wired terminal box consolidates electrical connections to a low voltage terminal box.

Standard Equipment

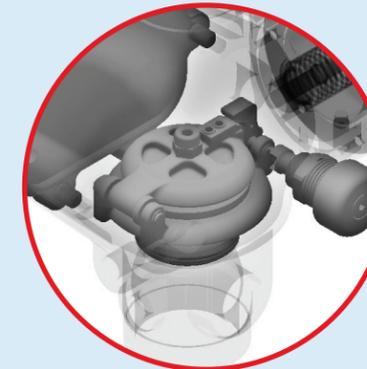

Factory installed and tested saves you time

Pre-assembly saves time, saves money, and reduces electrical wiring errors, ensuring proper operation and performance. Simple software selection between single and double-interlock preaction operation without rewiring. The heart of the system is the DDX Valve. Including the N₂Blast® line, there are 13 valve configurations available.

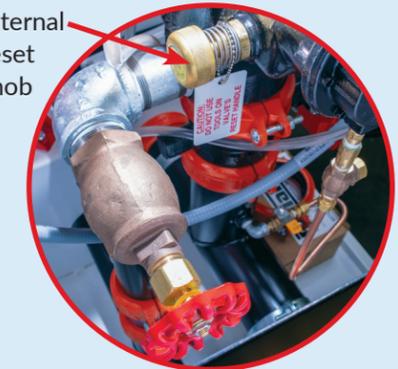

The DDX Valve Features and Benefits

Time and field-proven mechanical deluge valve with latching clapper. Helps prevent false-tripping and utilizes a single main drain valve. Valve sizes from 2" (50 mm) to 8" (200 mm).

Crafted from stainless steel, the clapper, seat, and push rod assembly resist corrosion.

External Reset Knob

Resetting the clapper of the Model DDX Deluge Valve is easily accomplished using the external reset knob at the rear of the valve.

Standard Accessories

Electrical connections consolidated to a factory-wired low voltage terminal box

Potter Alarm and Supervisory Pressure Switches (where applicable)

Potter Model RCDS-1 Releasing Circuit Disable Switch— Provides a supervised method of disconnecting the solenoid during system maintenance and service

Supply Side Control Valve

Other Accessories Include: Gauges, trim piping, wiring, and manual emergency release station.

Standard & Optional PrePaK™ System Equipment

Equipment Options

TRIMS

Deluge

- Electric Actuation
- Dry Pilot
- Wet Pilot

Single Interlock Preaction

- Type D Electric
- Dry Pilot
- Wet Pilot

Double Interlock Preaction

- Type D Electric/Electric
- Type F Electric/Pneumatic
- Type PL Pneumatic/Pneumatic

Dry Pipe

- DDX-LP
(Low Supervisory Pressure)

Other Optional Equipment

Model B1 Accelerator Trim Kit

Potter Model PFC4410RC Releasing Control Panel

QRM2 Quiet Air Compressors
½ HP, 1 HP, or 1½ HP

Nitrogen Supply Kit

Model NS-ASAM Kit

System Side Control Valve Kit

Nitrogen Tank Bracket

300 psi Solenoid

Desiccant Dryer

The DDX PrePaK™ N₂Blast® System

Increase the life expectancy of system piping and components with a South-Tek nitrogen generator

Available with Reliable® Preaction and Dry Pipe Systems

- 2" (50 mm), 2½" (65 mm), 3" (80 mm) and 4" (100 mm) valve sizes
- DDX Type D preaction, DDX Type F preaction, or DDX-LP dry-pipe configurations

South-Tek N₂Blast® Model FPS-900-RS Nitrogen Generator

- FM Approved nitrogen generator
- Pressure Swing Adsorption (PSA) technology
- System capacity up to 900 gallons
- Includes AutoPurge System™ vent

Benefits

- Lower pipe repair and replacement costs
- Two systems combined into one cabinet to save floor space and labor
- Reduced monthly maintenance costs by 25% near term and 30%-50% mid to long term
- Fewer business interruptions due to fewer leaks, problems, and maintenance
- Reduced liability related to a system not functioning
- Reduced threat from a potential catastrophic problem due to corrosion
- Lower long-term expense for full pipe replacement
- Having a fire protection system & partner, you can trust

FM Approved as a factory-assembled system.
cULus Listed Preaction System Valve or Dry Pipe Valve.

THE RELIABLE® DIFFERENCE

*Assembled in-house. Never outsourced.
Built in Liberty, South Carolina by Reliable®.*

- Factory assembled and performance tested by Reliable®, saving time in the field.
- A Reliable® trained technician assembles each PrePaK™ System.
- Reliable® technicians stand behind their work, signing each PrePaK™ cabinet they make.
- Each PrePaK™ System passes Reliable's rigorous performance testing.
