ThreadGUARD™ is a patent pending, UL classified OEM guard designed for new construction. In addition, ThreadGUARD™ is a cost effective option within pallet racks as an alternative to Pre-action and ESFR systems. The ThreadGUARD™ two-piece system threads directly into the fire suppression line fitting. ThreadGUARD™ is designed to protect sprinkler heads from inadvertent activation by foreign objects. The ThreadGUARD™ cage is secured with two 5/16” bolts and Nylock nuts which allow for easy access to the sprinkler head.

**ThreadGUARD™ Features**
- Integrated directly into the fire suppression system
- Prevents inadvertent activations
- Compact, unobtrusive design
- Durable industrial strength construction
- Two piece system engineered for sprinkler head service
- Quick and easy installation
- UL classified
Replacing Liabilities With Solutions

“We have had several sprinkler head breaks due to pallets and/or product hitting them. Every time this happens it has cost us thousands of dollars in cleanup and product loss. The standard thin metal sprinkler covers were not protecting the heads from breaking. We tested 10 SprinkGUARDs in our facility and everyone liked them and felt that SprinkGUARD is the solution we have been looking for since 2004. We ordered another 1,200 guards and they will be installed in all areas in the warehouse that have in-rack sprinklers.”

DIRECTOR OF FACILITIES & ENERGY
FOUR SEASONS PRODUCE, INC.

“We chose SprinkGUARD to protect our recreational facilities because their design gives us the most protection we could find for the fire sprinkler heads within our fire suppression system. The cost of SprinkGUARD is minimal compared to what we lost when our facility was flooded from a basketball hitting a sprinkler head and causing a flood. This disaster not only cost us financially, but we lost the use of our gym for 3 months as our wood floor was taken up and replaced.”

DEPARTMENT OF RECREATION
CITY OF FORT COLLINS, COLORADO

The ThreadGUARD™ Difference

Protection
The patent pending design enables the unit to thread directly into the supply line, preventing the guard from coming into contact with the sprinkler head.

Strength
ThreadGUARD™ is constructed of heavy duty, laser cut, welded steel.

Investment
The durability of ThreadGUARD™ makes it a one time purchase.

Design
ThreadGUARD™ is aesthetically conforming to most applications and available in a variety of colors to match its surroundings.

Versatility
Standard sizes and custom design options to meet specific applications.

American Made
ThreadGUARD™ is proudly designed and manufactured in the U.S.A.

Perfect For Various Applications
- Athletic Facilities
- Dormitories
- Libraries
- Hotels
- Hospitals
- Data Centers
- Warehouse Facilities
- Distribution Centers
- High Value Merchandise Locations
- Document Storage Areas
- Frozen Food Storage Facilities
- Retail Stores & Restaurants
